

# TRANSPORT DISTRIBUTION

## Transport Management System (TMS)

Mainly used for road transport management, the TMS system is a fundamentally important tool in logistics operation management. The system of transport management helps in the planning, execution, monitoring and control of activities related to collection and delivery of merchandise, whether consolidated in containers or not; issue of documents; and traceability of the fleet and the goods.

## TMS -Express

This system for monitoring express delivery items carried by motorbikes is used as a tool controlling urban distribution of goods. The software has, therefore, a fundamental importance for quality in the client's after-sales operations.

## GKO

The system checks whether or not the value charged for transporting the goods is within the amount combined. In addition to this freight audit and operation support facility, we can track delivery of the goods right up to the final destination and, thereby assess the performance of the hired transporter. It is one of the few items of software bought out.

# TRANSPORT DISTRIBUTION

## **Visibility, Transparency and Adequate Levels of Service (delivery time precision) at a comfortable price?**

Wilson, Sons plans, optimizes and manages the flow of your company's transport. Transport is modelled in an optimum manner to maximise the work at a minimum cost.

Our informations and quality systems allow us, in terms of quantity and quality, to ensure an impartial choice, both for modal and Transport company jobs, based entirely on the needs of the client and the total cost of the entire operation, not just the price.

## **Distribution Logistics Management receives firm support from our informations management**

We consolidate all our logistics information, providing an integrated view for the client.

One of our prerequisites is that information must always circulate faster than the goods. To handle this control, Wilson, Sons uses Electronic Data Interchange (EDI) for exchanging files with clients

Our independent situation allows us to exchange relevant information with all parties involved in the logistics process. This is an extremely flexible approach, facilitating the entry of new partners.

You can locate despatched material and orders using the reference numbers on commercial documents.

## **Wilson on Line**

With the same level of security, the same information is available for consultation on the internet, from stock positions of given products through to distribution tracking

## **A solution for each shipment**

Wilson, Sons Logística works with the more qualified suppliers and partners in the business of logistics solutions.

We have strategic partners for the most varied types of transport. The selection process is made on the basis of the needs and preferences of the client, in line with company directives, ensuring gains in productivity and complete reliability in performing the operations.

All shipments are delivered in vehicles having adequate cargo capacity in accordance with legal requirements, adhering to the level of service determined by the client.

- » Cargo tracking
- » Personnel training
- » Specific, dedicated and shared vehicles
- » Itineraries focused on productivities
- » Operational synergy with the client
